Sam Dahal

Executive Director | Enterprise Data & Platform Strategy | Databricks
| Microservices | Global Engineering Leadership
Columbus, Ohio, United States

Summary

I am an Executive Director and senior engineering leader with 10+ years of experience building and scaling enterprise technology organizations within highly regulated environments. I lead global engineering teams (50+ FTEs) delivering mission-critical data and application platforms at scale. My focus is simple: align engineering execution with business strategy, modernize legacy systems, and build high-performing organizations that deliver measurable outcomes. Over the course of my career, I have:

- Directed enterprise Databricks platform initiatives supporting a firm-wide “One Data Strategy,” accelerating onboarding and data adoption across the Line of Business
- Led the full rewrite of a regulatory platform under federal deadline, avoiding \$2M+ per day in potential fines
- Modernized enterprise workplace reservation systems serving tens of thousands of employees, enabling real-time booking and operational automation
- Reduced onboarding cycles by 50%+ through AI-powered automation and platform self-service tools
- Scaled global engineering organizations while strengthening architecture governance and delivery consistency

My leadership philosophy centers on ownership, accountability, and long-term platform resiliency. I build organizations that absorb pressure, solve complex problems, and execute with clarity under constraint. Technically, my background spans enterprise architecture, cloud modernization, microservices (Spring Boot), modern front-end platforms (React/Angular), and big data systems (Databricks). Strategically, I focus on organizational design, leadership development, and translating executive vision into scalable technology execution. I am always interested in conversations around enterprise platform strategy, engineering leadership, data modernization, and building resilient technology organizations.

Experience

JPMorganChase

4 years 11 months

Executive Director - Director of Software Engineering

January 2026 - Present (4 months)

Columbus, Ohio Metropolitan Area

- Lead multi-team engineering organization delivering enterprise workplace technology platforms at scale.
- Accountable for platform strategy, operational resilience, and engineering standards.
- Scaled systems supporting millions of daily transactions with zero-downtime deployments.
- Delivered automation initiatives reducing onboarding effort by 50% and manual operations by 40%.
- Drive workforce strategy, talent development, and organizational performance across 50+ technologists.
- Partner with senior business stakeholders to translate enterprise strategy into technology execution.

Vice President - Senior Manager

June 2025 - January 2026 (8 months)

Columbus, Ohio Metropolitan Area

Directed multiple platform teams (25+ FTEs) to implement enterprise-wide Databricks-based “One Data Strategy” across the Line of Business.

- Led architectural design and rollout of scalable big data platform enabling unified data access, governance, and analytics modernization.
- Accelerated data onboarding and adoption by standardizing ingestion patterns, CI/CD pipelines, and platform governance frameworks.
- Launched AI-powered onboarding chatbot and automation portal, reducing onboarding cycles by 50%+ and improving user self-sufficiency.
- Partnered with senior business and product stakeholders to define long-term platform vision aligned with enterprise data strategy.
- Established engineering best practices and coding standards (“Kickstarter Coding Guide”), reducing time-to-productivity for new teams and improving delivery consistency.
- Scaled global engineering capacity to support expanding analytics workloads and cross-functional data initiatives.
- Ensured platform resiliency, compliance alignment, and operational stability for mission-critical data systems.

Vice President - Senior Manager

November 2023 - June 2025 (1 year 8 months)

Columbus, Ohio Metropolitan Area

- Directed engineering organization delivering enterprise workplace reservation platform used by tens of thousands of employees across multiple regions.
- Led modernization of Space Reservation System into a scalable Spring Boot microservices architecture with React/Angular front-end, improving reliability and long-term maintainability.
- Delivered real-time seat availability and intelligent booking capabilities supporting enterprise return-to-office strategy.
- Implemented Line of Business (LOB) entitlement controls, same-day reservation synchronization, and book-on-behalf functionality to align workplace technology with evolving business needs.
- Scaled platform to handle millions of daily transactions while maintaining high availability and zero-downtime deployments.
- Established architecture governance and cross-team design reviews, reducing rework by 30% and improving engineering consistency.
- Automated CI/CD pipelines and deployment processes, strengthening release stability and accelerating feature delivery.
- Partnered with senior business and operations stakeholders to define product roadmap and prioritize investment aligned with enterprise workforce strategy.
- Proactively identified and mitigated platform risks, ensuring adherence to enterprise security, compliance, and resiliency standards.
- Built and developed a high-performing global engineering team, improving velocity consistency and succession readiness.

Vice President - Senior Manager

June 2021 - November 2023 (2 years 6 months)

Columbus, Ohio Metropolitan Area

- Led full-scale rewrite of legacy resiliency system into modern Spring Boot microservices architecture, meeting critical federal compliance deadline.
- Directed global engineering organization (US & UK) across multiple teams, ensuring delivery predictability and architectural integrity.
- Established cross-team architecture council and governance model, reducing rework by 30% and strengthening long-term platform scalability.
- Implemented CI/CD automation and zero-downtime deployment processes to improve release stability and operational resilience.
- Partnered with risk, compliance, and business stakeholders to align platform capabilities with evolving regulatory mandates.
- Proactively identified system vulnerabilities and technical debt, driving remediation ahead of audit and regulatory review cycles.

- Strengthened succession planning and leadership bench by mentoring senior engineers and engineering managers.

The Cincinnati Insurance Companies

Developer III

July 2018 - June 2021 (3 years)

Cincinnati Area, KY

Developer within CIC shared service division

- design and enhancements of CIC electronic delivery system(application responsible for sending policy and billing statements to the customers)
- pair programming/coaching junior developers and interns
- designed and implemented document processing/uploading system via email for multiple business units saving significant amount of time for agents and underwriters
- Implemented various SOAP/REST web services to communicate with internal/external applications
- participated with whole SDLC life-cycle (Design/Coding/Deployment) of the application
- Implemented continuous integration using Jenkins
- Technologies used : Bootstrap, CSS, JQuery, AJAX, AngularJS, Java, Spring, Maven, TFS, QuickBuild, Maven, Linux,
- IDE: Eclipse, IntelliJ IDEA

Great American Insurance

Application Analyst and Developer

December 2015 - July 2018 (2 years 8 months)

Cincinnati Area, KY

Software Developer for Great American New System policy administration software. Currently working on rewriting the legacy system using modern technologies like AngularJS, HTML5, CSS3, SASS, Bootstrap, NodeJS, Java, Groovy, and a slew of few other technologies using agile methodology.

- Fixed various data integrity issue by tightening the security of the policy admin system using AOP(Aspect Oriented programming)
- Go to person for pub/sub adapter, a real-time policy admin to downstream data adapter
- Provided several enhancements using HTML5/CSS3/AngularJS/JQuery on the frontend and Groovy/Java on the back-end
- Quickly resolved high priority, critical defects affecting multiple business units

- Implemented pub/sub component responsible for sending real time data to the downstream systems
- Built JAX-WS client to get city, state/provinces for multiple countries
- Refactored core component of pub/sub system which accelerated development time significantly
- Core enhancement of the policy admin system across multiple business units
- Written unit tests and integration test using JUnit and Jasmine testing frameworks
- Delivered feature enhancements on time leading to high customer satisfaction
- Provided various other business values which simplify the work of business users
- Used SOLID and various other design principles to keep code clean and maintainable
- Provided highest level of technical supports to user on the escalated production incident
- Cross training/supporting developers in areas where I have an expertise

Technologies: HTML5, CSS3, AngularJS, OracleDB, Java, Spring, Groovy, Git, Maven, Jenkins

Hyatt Hotels Corporation via SmartSource

Consultant - Junior Developer

January 2015 - December 2015 (1 year)

Greater Chicago Area

I was a developer for Hyatt's web based event management app which was used by all(500+) hotels. Primarily responsible for small feature design, and enhancements, and a bunch of development and non-development adhoc requests...Analyzed and resolved common ticketing issue and implement code solution which saved the operation cost

Technologies: HTML, CSS, JavaScript, BackboneJS, Java, SpringMVC, J2EE, Maven, Jenkins, Hibernate, Informix DB, SVN

Education

Southern New Hampshire University

Bachelor's degree, Computer Science · (May 2021)
