SUMMARY

Senior Leader of Engineering with 10+ years of experience leading large engineering organizations and scaling global teams of up to 26+ FTEs. Proven record of modernizing enterprise platforms, driving big data and GenAI strategy initiatives, and delivering mission-critical systems under regulatory deadlines — including a rewrite that avoided \$2M+/day in fines. Adept at aligning engineering strategy with business goals, mentoring engineering managers and senior developers, and building cross-functional organizations that deliver measurable outcomes.

CORE COMPETENCIES

Leadership & Strategy	Engineering Management · Organizational Scaling · Agile Delivery · Cross-Functional Collaboration · Global Team Leadership · Mentorship
Technical Strategy	Enterprise Architecture · Cloud Migration · Microservices · Data Platforms (Databricks) · CI/CD Pipelines · Resiliency Engineering
GenAI & Agentic Coding	LLM Integration · Agentic Workflow Design · AI-Powered Developer Tooling · Prompt Engineering · Chatbot & Copilot Development · Claude / OpenAI APIs
Hands-On Technologies	Java · Spring Boot · React · Angular · SQL · AWS

KEY ACHIEVEMENTS

- Directed 26+ FTEs across platform teams to deliver JPMorgan's Databricks-based 'One Data Strategy' platform, accelerating onboarding and data adoption across the LOB.
- Led full rewrite of ERMA platform under federal deadline, avoiding \$2M+/day in regulatory fines.
- Scaled engineering org from 8 to 20+ globally distributed developers, improving delivery capacity and velocity consistency.
- Introduced AI-powered onboarding chatbot and portal, cutting team onboarding time by 50%+.
- Pioneered GenAI and agentic coding adoption across engineering teams, accelerating developer productivity and enabling AI-first workflows.

PROFESSIONAL EXPERIENCE

JPMorgan Chase & Co.

Executive Director, Director of Software Engineering 2021 – Present Columbus, OH

Platform Leadership – Big Data (Databricks)

- Directed multiple platform teams and managed 26+ FTEs to implement the firm's big data strategy on Databricks, enabling a unified 'One Data Strategy' across the line of business.
- Accelerated onboarding efficiency by launching an AI-powered chatbot and seamless onboarding portal, reducing onboarding cycles by 50%+.
- Championed creation of a Kickstarter Coding Guide, standardizing best practices and drastically reducing time-to-productivity for new teams.
- Integrated GenAI tooling and agentic coding assistants into developer workflows, improving code quality and reducing repetitive development tasks across platform teams.
- Partnered with product and business leaders to define platform vision, ensuring adoption aligned with LOB's long-term data and AI strategy.
- Mentored engineering leads across platform teams, building leadership bench strength and driving sustainable delivery.

Enterprise Applications Leadership (ERMA & SRS)

- Directed engineering org of 20+ developers across US and UK, delivering enterprise resiliency and workplace reservation platforms used by tens of thousands of employees.
- Replaced legacy ERMA system with modern Spring Boot platform, meeting a critical federal deadline and avoiding \$2M+ per day in potential regulatory fines.
- Modernized space reservation platform (SRS), introducing LOB entitlement, same-day sync, and automated seat suggestions, improving adoption and operational efficiency.
- Scaled global engineering team by leading hiring and onboarding across US and UK, improving ramp-up speed and organizational delivery capacity.
- Established cross-team architecture council and weekly design reviews, ensuring long-term scalability and reducing rework by 30%.
- Mentored senior engineers and future leaders, increasing velocity consistency and succession readiness across multiple teams.

Cincinnati Financial Corporation

Developer III 2018 – 2021 Cincinnati, OH

- Enhanced eDelivery application (paperless billing) using Java, Spring Boot, Angular, and Bootstrap.
- Migrated legacy JSP/Spring app to Angular 6 + Spring Boot, improving maintainability and performance.
- Implemented CI/CD pipelines with Jenkins, reducing deployment errors and cycle time.
- Mentored developers, conducted code reviews, and supported team growth through servant leadership.

Great American Insurance Group

Application Analyst & Developer 2015 – 2018 Cincinnati, OH

- Rewrote legacy policy administration system with AngularJS, Spring, and Groovy, improving usability across multiple business units.
- Implemented web service for policy issuance in Mexico, enabling international expansion.
- Refactored pub/sub components to accelerate development and improve downstream integrations.
- Mentored interns and developers, fostering team-wide adoption of SOLID principles.

Hyatt Hotels Corporation

Junior Software Developer Jan – Aug 2015 (Internship) Chicago, IL

- Enhanced Hyatt's global sales system used by 500+ hotels, adding localization and billing automation.
- Developed REST APIs for integration with Oracle POS, streamlining hotel operations.
- Delivered enhancements in HTML, CSS, and JavaScript, improving user experience and branding consistency.
